

ABHISHEK CHAYADRI VAIDYA

Dallas, TX | 945.367.2111 | abhishekcvc@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Blog](#)
CompTIA Security+ | ISC2 Certified in Cybersecurity (CC) | TryHackMe Top 1% (Global)

SUMMARY

Full-stack developer who builds **secure, production-grade web applications end-to-end**: React/Next.js frontends, Node.js and Spring Boot APIs, PostgreSQL data layers. M.S. Cybersecurity candidate at UT Dallas (GPA 3.89, graduating May 2027), **available for software engineering internships and co-ops**. Enterprise experience on Boeing's core HR platform at TCS (5× award recipient); founder of Pixelora, a product studio building and shipping real-world client software, with code that is fast, tested, and hardened by default.

EDUCATION

University of Texas at Dallas | M.S., Cybersecurity, Technology and Policy | GPA: 3.89

Expected May 2027 | Dallas, TX

- Coursework: Cyber Security Essentials, Data Security & Privacy, Digital Forensics & Incident Management, Conflict in Cyberspace

Visvesvaraya Technological University | B.E., Electronics and Communications

June 2023 | Karnataka, India

SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React, Next.js 14, Tailwind CSS, shadcn/ui, Zustand, REST & GraphQL API integration

Backend & Data: Node.js, Express, Spring Boot, JWT, Supabase, Firebase, PostgreSQL (Row-Level Security), MongoDB

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, GitHub Actions, Vercel, Git, Jira, ServiceNow, Agile

Security: OWASP Top 10, Secure Coding, RBAC, Burp Suite, OWASP ZAP, SonarQube, Wireshark, Nmap

EXPERIENCE

University of Texas at Dallas | Student Assistant Developer

Nov 2025 - Present | Dallas, TX

- Independently designed and built an inventory management application (Next.js, Supabase/PostgreSQL) consolidating fragmented device datasets into one searchable scanning/tracking platform, adopted team-wide and recognized by university staff
- Implemented authentication and multi-role access control with Supabase, enforced server-side through PostgreSQL Row-Level Security policies (supervisor-only alert-list exports)
- Hardened the application with input validation across all user-facing forms and remediated over-permissive API endpoints application-wide

Tata Consultancy Services | Full Stack Developer

Feb 2024 - May 2025 | Maharashtra, India

Boeing Program • 5× TCS Award Recipient

- Developed features across Boeing's core HR application (React, Spring Boot, SQL), implementing RBAC across 40+ REST endpoints (role checks, role-filtered API responses, permission-gated UI), closing 6+ authorization gaps across frontend and backend
- Redesigned legacy API endpoints to return minimal, role-scoped payloads and introduced lazy loading on data-heavy HR tables so only in-view, authorized records are retrieved, improving performance and reducing data exposure
- Enforced a SonarQube quality gate (90%+ required) in the CI/CD pipeline for every production branch, identifying and remediating code vulnerabilities and hotspots before release
- Closed 120+ development and production tickets (Jira, ServiceNow) on change packages valued at \$5K-\$30K each; earned 2× Star of the Month and an On-the-Spot Award for production support

PROJECTS

HIPAA-Compliant Hospital Management System | Next.js, Supabase/PostgreSQL, TypeScript

2026

- Co-developed a HIPAA-aligned hospital platform in a 4-person team on a Zero-Trust, six-portal architecture isolating PHI by role; manuscript in preparation with UT Dallas faculty
- Owned the database and encryption layer: designed the complete PostgreSQL schema, built the core hospital management APIs, and implemented AES-256-GCM application-level encryption; validated via OWASP ZAP and Burp Suite
- Built a doctor-initiated referral module with time-bound (72-hour) encrypted links and contributed to PostgreSQL Row-Level Security policies, validating enforcement through Postman API fuzzing

Secure E-Commerce Platform | React, Node.js, PostgreSQL, Supabase

[Live ↗](#) | [GitHub ↗](#)

- Built a production-grade commerce platform with product catalog, shopping cart, real-time inventory, and secure multi-user checkout
- Hardened against OWASP Top 10 risks (CSRF, injection, broken authentication) with JWT auth and RBAC, identifying and closing 16 vulnerabilities pre-launch

Moviefy: AI-Powered Movie Discovery | Next.js 14, Supabase, Gemini AI

[Live ↗](#) | [GitHub ↗](#)

- Integrated Google Gemini AI for behavior-based personalized recommendations; built trial modes, playlist creation, and social sharing; optimized API calls and lazy loading to cut page load by ~5s
- Architected a modular Next.js 14 app with server-side rendering, dynamic routing, Zustand, and Supabase row-level security, achieving fast navigation and high Lighthouse scores

Azure Honeypot & Threat Detection Lab | T-Pot, ElasticStack, Kibana

[Write-up ↗](#) | *2025*

- Deployed a T-Pot honeypot on Azure, generating 200+ SIEM events and identifying 22+ unique IOCs from SSH brute-force and port-scan campaigns via log correlation, traffic analysis, and OSINT-based attribution (WHOIS, geolocation)
- Built and documented a full threat-intelligence workflow covering live event ingestion, ElasticStack log correlation, and OSINT attribution of attacker IPs; published on Medium

AWARDS, RECOGNITION & WRITING

- **5× TCS Awards (2024-2025):** Star of the Month ×2 (individual), Best Team ×2, On-the-Spot (emergency production support)
- **Technical Writing (Medium):** [Azure Honeypot / SIEM](#) • [Secure E-Commerce Implementation](#) • [CompTIA Security+ in 2 Months](#)
