

ABHISHEK CHAYADRI VAIDYA

Dallas, TX | 945.367.2111 | abhishekvaidya@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [Blog](#)
CompTIA Security+ | ISC2 Certified in Cybersecurity (CC) | TryHackMe Top 1% (Global)

SUMMARY

Full-stack developer who builds **secure, production-grade web applications end-to-end**: React/Next.js frontends, Node.js and Spring Boot APIs, PostgreSQL data layers. M.S. Cybersecurity candidate at UT Dallas (GPA 3.89, graduating May 2027), **available for software engineering internships and co-ops**. Enterprise experience on Boeing's core HR platform at TCS (5× award recipient). [Founder of Pixelora](#), a product studio building and shipping real-world client software, with code that is fast, tested, and hardened by default.

EDUCATION

University of Texas at Dallas | M.S., Cybersecurity, Technology and Policy | GPA: 3.89 *Expected May 2027 | Dallas, TX*
• Coursework: Cyber Security Essentials, Data Security & Privacy, Digital Forensics & Incident Management, Conflict in Cyberspace
Visvesvaraya Technological University | B.E., Electronics and Communications *June 2023 | Karnataka, India*

SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React, Next.js 14, Tailwind CSS, shadcn/ui, Zustand, Framer Motion, Zod, REST & GraphQL API integration

Backend & Data: Node.js, Express, Spring Boot, JWT, Supabase, Firebase, PostgreSQL (Row-Level Security), MongoDB, Redis

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, GitHub Actions, Vercel, Cursor (AI-assisted dev), Git, Agile

Security: OWASP Top 10, Secure Coding, RBAC, Zero Trust, HIPAA, Burp Suite, OWASP ZAP, SonarQube, Wireshark, Nmap

EXPERIENCE

University of Texas at Dallas | Student Assistant Developer [Live ↗](#) | Nov 2025 - Present | Dallas, TX

- Earned team-wide adoption and university staff recognition for an inventory platform that consolidated fragmented device datasets into one searchable scanning/tracking system, independently designed and built with Next.js and Supabase/PostgreSQL
- Implemented authentication and multi-role access control with Supabase, enforced server-side through PostgreSQL Row-Level Security policies (supervisor-only alert-list exports)
- Hardened the application with input validation across all user-facing forms and remediated over-permissive API endpoints application-wide

Pixelora | Founder & Lead Developer [pixelora.org ↗](https://pixelora.org)

- Building Roam Tribe, an AI-powered travel platform that generates personalized itineraries and includes a dedicated solo-travel guide and community for women; also ship in-house products including Moviefy, an AI movie-discovery app
- Delivered end-to-end client software as sole developer, including a production restaurant management system (menu ordering, table management, payment processing) and multiple client websites (Next.js, TypeScript, Tailwind CSS, Framer Motion)

Tata Consultancy Services | Full Stack Developer | Client: Boeing

Feb 2024 - May 2025 | Maharashtra, India

Boeing's primary company-wide HR platform • 5× TCS Award Recipient

- Closed 6+ authorization vulnerabilities across the frontend and backend of Boeing's core HR application by implementing RBAC across 40+ REST endpoints (role checks, role-filtered API responses, permission-gated UI) in React, Spring Boot, and SQL
- Championed secure delivery by owning the SonarQube security quality gate (90%+ threshold) in the CI/CD pipeline for every production branch, remediating code vulnerabilities and security hotspots before each release
- Reduced data exposure and improved page performance by redesigning legacy API endpoints to return minimal, role-scoped payloads and introducing lazy loading on data-heavy HR tables, retrieving only in-view, authorized records
- Raised code quality across a 10+ person team via reusable component libraries and secure coding standards in reviews
- Closed 120+ development and production tickets (Jira, ServiceNow) on change packages valued at \$5K-\$30K each; earned 2× Star of the Month and an On-the-Spot Award for production support

PROJECTS

HIPAA-Compliant Hospital Management System | Next.js, Supabase/PostgreSQL, TypeScript

[Live ↗](#) | [GitHub ↗](#)

- Co-developed a HIPAA-aligned hospital platform in a 4-person team on a Zero-Trust, six-portal architecture isolating PHI by role; manuscript in preparation with UT Dallas faculty
- Owned the database and encryption layer: designed the complete PostgreSQL schema, built the core hospital management APIs, and implemented AES-256-GCM application-level encryption so PHI remains unreadable even if the database is compromised
- Built a doctor-initiated referral module with time-bound (72-hour) encrypted links and contributed to PostgreSQL Row-Level Security policies; validated enforcement via OWASP ZAP, Burp Suite, and Postman API fuzzing

Secure E-Commerce Platform | React, Node.js, PostgreSQL, Supabase

[Live ↗](#) | [GitHub ↗](#)

- Built a production-grade commerce platform with product catalog, shopping cart, real-time inventory, and secure multi-user checkout
- Hardened against OWASP Top 10 risks (CSRF, injection, broken authentication) with JWT auth and RBAC, identifying and closing 16 vulnerabilities pre-launch

Moviefy (Pixelora): AI-Powered Movie Discovery | Next.js 14, Supabase, Gemini AI

[Live ↗](#) | [GitHub ↗](#)

- Integrated Google Gemini AI for behavior-based personalized recommendations; built trial modes, playlist creation, and social sharing; optimized API calls and lazy loading to cut page load by ~5s
- Architected a modular Next.js 14 app with server-side rendering, dynamic routing, Zustand, and Supabase row-level security, achieving fast navigation and high Lighthouse scores

AWARDS, RECOGNITION & WRITING

- **5× TCS Awards (2024-2025):** Star of the Month ×2 (individual), Best Team ×2, On-the-Spot (emergency production support)
- **Technical Writing (Medium):** [Azure Honeypot / SIEM](#) • [Secure E-Commerce Implementation](#) • [CompTIA Security+ in 2 Months](#)
